

LUXURY BIOCLIMATIC PERGOLAS

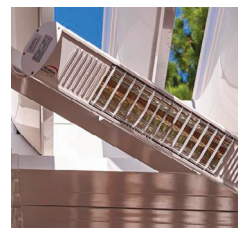

CUSTOM-MADE PERGOLA **OPTIONS**

OPEN IT

OPEN'IT, integrated into the structure, the system is designed to be modular and easy to handle. You will double the shaded surface when the arms are fully extended.

VISION Models 500-400-300-250-200

HEATING

Designed with short-wave infrared technology, the heater provides you with immediate targeted warmth, without heat loss and without glare.

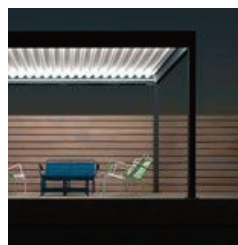

VISION Models 500-400-300-250-200

MISTING

Misting is the vaporization of water into micro-droplets which, by evaporating instantly, cools the air by several degrees without wetting the ground..

VISION Models 500-400-300-250-200

LIGHTING

Lighting with or without light variation. Controlled with your remote, you will have homogeneous LED lighting for your terrace.

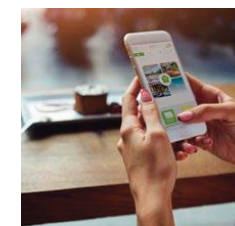

VISION Models 500-400-300-250-200

WINDOW

Create a new living space with a winter garden, thanks to the transparent sliding or fixed panels.

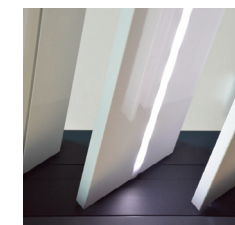

VISION Models 500-400-300-250-200

HOME AUTOMATION

Control your pergola as you wish, from home or remotely from your smartphone, tablet, or computer.

VISION Models 500-400-300-250-200

LED

LED strips with light dimming are integrated around the perimeter in the beams. Light variation throughout the entire pergola.

VISION Models 500-400-300-250-200

STORE

Excellent protection against the wind, the setting sun, the outside view, and sand projections from Dubai.

VISION Models 500-400-300-250-200

PROTECT BLADES

The rigid lateral blades adjustable by remote control. Design and excellent protection are ideal against wind, the setting sun, and outside view.

VISION Models 500-400-300-250-200

CUSTOM-MADE PERGOLA

MISTING - SELF-CLEANING

THE TECHNOLOGY OF "EVAPORATIVE COOLING"

Our technology eliminates the two major problems of conventional systems: unwanted wetting and nozzle scaling. Misting does not consist of "wetting" like a shower, but of creating a dry fog that instantly cools the air. It is a direct application of the physical principle of evaporation.

The operation is based on a simple thermodynamic law: to evaporate, water needs energy (heat). When our nozzles spray micro-droplets of water into the air, they evaporate almost instantly. To transition from the liquid state to the gaseous state (vapor), each droplet absorbs the surrounding heat.

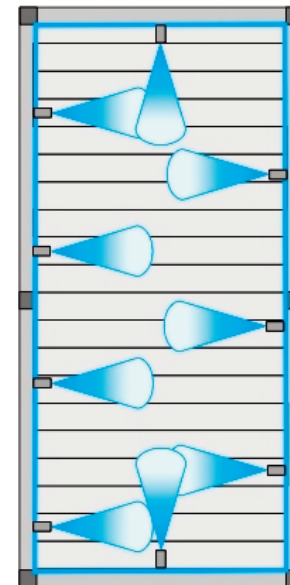

Result: The air temperature around the drop drops sharply.

CLEANING OF SAND AND TRACES OF LIMESTONE

The system is based on the installation of high-pressure stainless steel nozzles with an outlet diameter of 0.50 mm. These are mounted horizontally in an overlay and integrated directly onto the pergola roof. The misting duration is calibrated between 1 minute and 1 minute 30 seconds, depending on the tested conditions.

For a standard configuration, the pergola is equipped with 9 nozzles (according to the reference plan). This micro-misting allows for washing away dust and residues accumulated on the roof, taking advantage of the natural slope of the structure to ensure drainage.

Welcome

PERGOLA SWISS CONCEPT

Products exclusively for Dubai

About us ?

PERGOLA SWISS CONCEPT was born from a simple conviction: excellence allows no compromise.

After having developed and managed Vision d'Extérieurs in Switzerland since 2010, Eric Ménager wanted to extend this expertise to a destination where architecture, design, and the art of living reach exceptional standards: Dubai.

Each completed project reflects the values that have built this reputation: precision, reliability, elegance, and durability. Our pergolas and carports are not mere structures, but architectural creations designed to enhance the most prestigious places.

Pergola Swiss Concept addresses those who seek Swiss excellence, without compromise, in every detail.

1000 Pergolas installed
6 showrooms
6 Possible options
Qualicoat powder coating

Motors resistant to temperatures up to 140°C
Self-cleaning system

We collaborate with the best in the profession.

OUR UNIQUE MANUFACTURING FACTORY

Within the 30,000 m² of workshops, eco-design guides every step of production. We ensure responsible environmental management: all our industrial waste (aluminum, steel, technical fabrics) and non-hazardous industrial waste are systematically collected and directed to approved recycling channels, thus guaranteeing the full recovery of materials.
