

LUXURY BIOCLIMATIC PERGOLAS

VISION 300 by PERGOLA SWISS CONCEPT
Download the brochure on our website ([click here](#))

SHADED LUXURY PAVILIONS - VISION 300

The VISION 300 bioclimatic pergola protects from the sun, rain, and optimizes air circulation. It offers total control of sunlight exposure thanks to the orientation of its slats. Pergola certified by CSTB.

MAXIMUM DIMENSIONS

Maximum extension: 6.08 m. Maximum width: 4.5 m.

Maximum height: 3.10 m.

VISION 300 XXL! Extension up to 7.4 m x 4.5 m wide.

LIGHTING WITH WHITE LEDs INTEGRATED INTO THE PROFILE OF THE SLATS.

Peripheral RGB color lighting (Optional)

Controlled with your remote, you will have a uniform LED lighting of your terrace to fully share your moments of togetherness.

STRUCTURE

Extruded aluminum posts measuring 14 x 14 cm wide and 2.7 m high are fully integrated into the profiles.

No visible screws for a perfect finish.

Large double-walled slat width. Rainwater drainage from the gutters to the posts.

ADJUSTABLE BLADES

Radio motorization as standard. Somfy io radio motorization optional.

RAL 9016

RAL 9007

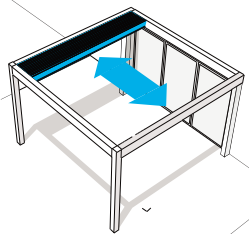

FS 7016

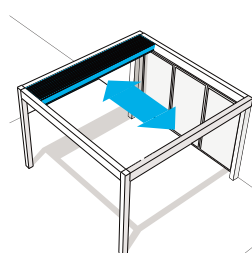

Colors and textures

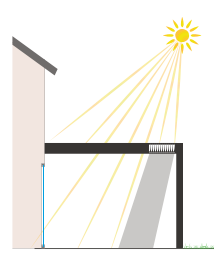

Choose from 3 shades (RAL 9016, RAL 9007, and FS 7016) or any other RAL color.

OUR CONNECTED SOLUTIONS

NINA - TAHOMA - CONNEXOON TERRASSE

TaHoma switch:

It is a smart control, offering 2 buttons launching your favorite scenarios to centralize the connected devices in your home. Control your connected home, anytime & anywhere. TaHoma switch is compatible with Somfy products, partners, and voice assistants.

NINA:

Touch remote control for centralizing the management of home scenarios. A simple swipe on the screen to select, command, save, and position the home devices. Create scenarios by room or by zone and precisely adjust, with one gesture, the desired position.

CONNEXOON TERRASSE:

Put your terrace in connected mode. Create personalized atmospheres. Combine the lighting, the position of the terrace awning or pergola into an infinite number of settings. A change in weather, a doubt about the state of the lights. Check all the terrace equipment with one click and adjust them remotely.

Luxury bioclimatic technology

The response to Dubai's climate

An advanced Thermal Engineering to reduce the temperature under the pergola by 8 to 10°C

Welcome

Albedo Effect:

The lacquered surface of the slats reflects the majority of the solar radiation, preventing heat from passing through the structure. Thanks to this natural ventilation, the temperature under the pergola drops by 8 to 10°C. Your space remains cool and livable, even in July and August.

Venturi effect:

When the blades are slightly open, their aerodynamic shape accelerates the airflow, creating a low pressure that draws the hot air upward and replaces it with cooler air.

Our 15 years of experience in bioclimatics guarantees a transformation of your outdoor space into a living area, usable 365 days a year.

Total Protection (Closed Slats)

The slats fit perfectly together thanks to a double groove waterproof system that blocks UV rays and direct solar heat.

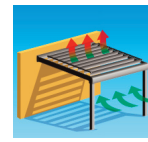

Ventilation and Light (Open Slats):

In a vertical position (90°-160°), the slats open to let natural light in and allow air to circulate freely.

Fine Regulation (Intermediate Position):

By tilting the slats at a precise angle (e.g., 45°), it is possible to block the harshest sun rays while letting indirect light and breeze pass through.

An Advanced Thermal Engineering Beyond Orientation
Bioclimatic technology uses physics to cool the space.

PERGOLA SWISS CONCEPT

Products exclusively for Dubai

About us ?

PERGOLA SWISS CONCEPT was born from a simple conviction: excellence allows no compromise.

After having developed and managed Vision d'Extérieurs in Switzerland since 2010, Eric Ménager wanted to extend this expertise to a destination where architecture, design, and the art of living reach exceptional standards: Dubai.

Each completed project reflects the values that have built this reputation: precision, reliability, elegance, and durability. Our pergolas and carports are not mere structures, but architectural creations designed to enhance the most prestigious places.

Pergola Swiss Concept addresses those who seek Swiss excellence, without compromise, in every detail.

1000 Pergolas installed
6 showrooms
6 Possible options
Qualicoat powder coating

Motors resistant to temperatures up to 140°C
Self-cleaning system

We collaborate with the best in the profession.

OUR UNIQUE MANUFACTURING FACTORY

Within the 30,000 m² of workshops, eco-design guides every step of production. We ensure responsible environmental management: all our industrial waste (aluminum, steel, technical fabrics) and non-hazardous industrial waste are systematically collected and directed to approved recycling channels, thus guaranteeing the full recovery of materials.
